- I- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = proteintyrosine + phosphate.
- I- TISSUE SPECIFICITY: Liver.
- I- SIMILARITY: Contains 1 FERM domain.
- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
- Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-NOV-1997 (Rel. 35, Created)

tyrosine + phosphate.

Type I membrane protein.

SUBCELIULAR LOCATION: Type I membrane protein.

SIMILARITY: Contains 3 immunoglobulin-like C2-type desimilarity: Contains 6 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 8 fibronectin type III domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.

PTM: A CLEAVAGE OCCURS THAT SEPARATES THE EXTRACELLULAR DOMAIN PROM THE TRANSMEMBRANE SEGENT:
SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 8 fibronectin type III domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     tyrosine + phosphate.

          CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protyrosine + phosphate.
SUBCELULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Expressed in every tissue examined.
SIMILARITY: Contains 1 protein-tyrosine phosphatase domain.
SIMILARITY: Contains 6 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                        1121

CATALYTIC ACTIVITY: Protein tyrosine phosphate +
tyrosine + phosphate.

SUBCELLULAR LOCATION: Type I membrane protein.

PTM: N- and O-glycosylated.

DISEASE: Defects in PTPRJ are found in cancers of
                                                                 breast.
SIMILARITY: Contains 1 protein-tyrosine phosphatase domain.
SIMILARITY: Contains 5 fibronectin type III domains.
SIMILARITY: Contains 5 fibronectin type III domains.

C -!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = professione + phosphate.

C -!- SUBCELLULAR LOCATION: Type I membrane protein (Probable).

C -!- TISSUE SPECIFICITY: Detected in brain, lung, kidney, heart,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

SUBCELLURAR LOCATION: Type I membrane protein (Probable).
TISSUE SPECIFICITY: Found in a variety of tissues. It is developmentally regulated in the brain (By similarity).
SIMILARITY: Contains 1 eukaryotic-type carbonic anhydrase domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
SIMILARITY: Contains 1 fibronectin type III domain.
